

Before you take admission...

Dear candidate,
Welcome to the department website.

You are advised to read what follows in this presentation before you confirm your admission in the department.

Have you read the syllabus?

Have you read the syllabus of the course
[MCA/MSc] that you intend to join?

Syllabus is rather different...

Well, you must have noticed that the departmental course syllabus **differs significantly** from most other colleges/universities in India.

NO language based courses/subjects are taught in the department.

NO technology based courses/subjects are taught in the department.

NO language based subjects

NO language based courses/subjects are taught in the department.

NO C/C++.

NO Java.

NO C sharp.

NO PHP.

In fact, we do NOT emphasize any language for that language's sake.

NO technology based subjects

NO technology based courses/subjects are taught in the department.

NO .Net.

NO J2EE.

NO Android.

No Web technology.

NO iOS.

In fact, we do NOT emphasize any such technology for any technology's sake.^{5 of 12}

Pause and think...

One may wonder, would anyone want to join such a department?

Well, it turns out that many students would love to.

While some people may not like what is offered over here.

Pause and think...

If you really like to learn and are not just interested in marks you may like to join.

But if you are habitual of typical college like study – that is “rote memorization style” study; that too only 10 or 15 days before the exams and that too from question banks and model answer books THEN this department is NOT suitable for you.

Advice

So, you will most likely enjoy your educational journey through this department **if you really look forward to learn programming**, and **if you enjoy learning with open mind and love to accept challenges that are a necessary part of real education**, and **are willing to put in the efforts required for it.**

Advice contd...

But if you are looking for getting **just an easy-to-have degree-certificate** that you think may help you build yourself a career then you may be disappointed. If such is a case, you may **NOT** find this place helpful for you to achieve your goal. So, if you are looking for just training in **Java/C++/.Net/PHP/Android etc**, this department may **NOT** be a good place for you.

Advice contd...

We try our best to provide you the education, the environment and the culture that, we think, help you become a good programmer, which has **many good career options in the IT industry.**

You are welcome to visit **our placement cell page.** (link is given at the end.)

Let us conclude by reiterating the following -

Advice contd...

Let us conclude by reiterating the following -

- do **NOT** take admission in this department, **if your goal is to become a Java/C++/Android/.Net/web technology based software developer**; as you may very well get frustrated or least get disappointed.

- **do take admission** in this department, **if your goal is to become a programmer**; we are pretty sure that you will enjoy and cherish the experience.

Thank you!
